

Delivery Lead Bootcamp

A clearer starting point for a complex role.

As the managed services ERP systems practice grew, more people entered Delivery Lead roles. Leadership acted early: varied experience and a few warning signs suggested uneven preparation before larger engagements.

THE PROGRAM THROUGHLINE

Follow the work.

- Initiate Set expectations and governance
- Deliver Lead operations and risk
- Renew Show value at renewal

MY ROLE

I led the design workstream and built the program blueprint.

I scheduled stakeholder meetings, guided session workstreams, and oversaw delivery. The program was designed and delivered with the broader team.

Audience ranged from Senior Associates through Directors.

How I framed it.

Looking back, this was a readiness risk, not a documented decline. The map clarified expectations; simulations and peers supported practice. Training alone was not enough. I proposed coaching afterward.

AUDIENCE

Approximately 50 intended participants, from Senior Associates through Directors. This is an audience estimate, not a completion count.

DAY 01

Launch the engagement

- Program welcome
- Cohort connections
- Starting a client engagement
- Working across cultures

DAY 02

Lead the delivery

- AI in delivery decisions
- AI judgment lab
- Commercial tradeoffs
- Service operations

DAY 03

Close and renew

- Quality signals and risk
- Closing and continuing the work
- Final case challenge : 2 hours

Illustrative agenda with adapted session titles. Exact clock times are not claimed.

01 / PROGRAM ARCHITECTURE

Three days. One engagement arc.

Leaders considered urgent topics first. I advocated for the engagement lifecycle so each day built toward the capstone. Leadership agreed; I think the sequence felt more cohesive.

Illustrative agenda · adapted session titles

DAY 01 / Launch the engagement

Program welcome · Cohort connections · Starting a client engagement · Working across cultures

DAY 02 / Lead the delivery

AI in delivery decisions · AI judgment lab · Commercial tradeoffs · Service operations

DAY 03 / Close and renew

Quality signals and risk · Closing and continuing the work · Final case challenge · 2 hours

Sessions ran 45-90 minutes, longer for priority topics. After lunch: protected work time.

What we wanted Delivery Leads to do.

These were program aims. They are not claims of measured performance gains.

Outcome ownership / Lead the engagement

Clarify ownership and take responsibility for delivery decisions.

PRACTICE Launch planning and team scenarios

Business Context & Responsible Delivery / Run the business

Weigh risk, quality, finances, and client value in delivery decisions.

PRACTICE Operational scenarios and capstone

AI-Native Delivery / Deliver through AI

Use AI-assisted inputs with human judgment and accountability.

PRACTICE AI judgment lab and capstone

Across all three, cultural agility, a service mindset, and peer learning shaped the practice.

The capstone put those decisions together.

Just before the capstone, teams met a fictional client: 90 minutes for decisions, then 30 for presentations and feedback.

DECISION AREAS Launch · Recovery · Finances · Quality · Renewal · AI use

A decision under pressure.

When ticket handoffs stall resolution, who owns recovery, and when should the Delivery Lead escalate?

This newly written RAID (risks, assumptions, issues, dependencies) excerpt shows the kind of decision evidence an activity could surface. It is not an original participant artifact.

RISK OR ISSUE

Unclear ticket handoffs delay resolution and obscure accountability.

OWNER & NEXT ACTION

The Delivery Lead assigns a handoff owner, reviews open work, and confirms the recovery path with the client contact.

ESCALATION TRIGGER

Escalate through agreed governance if ownership stays unresolved or the recovery plan risks a client commitment.

WHY

One named owner restores accountability before speed. The trigger keeps the client commitment visible.

A strong entry shows the action and the reasoning: why this owner, why this trigger.

“We would validate sustained performance with the client before calling the improvement durable.”

What we heard. What I'd change next time.

Respondents reported applicable skills, rated the program highly, and felt confident they understood the Delivery Lead role. Launch and cross-cultural sessions were especially valued; leadership feedback was positive.

After observing the Bootcamp, I proposed more preparation, longer simulations, lighter content, stronger behavior assessment, capstone evidence criteria, and follow-up coaching.

The available account does not include survey response counts, capstone scores, or post-program delivery measures. Reported confidence and value do not establish improved job performance. The next-iteration items above were proposals.

ABOUT THIS CASE

About this case. This is a confidentiality-safe account of real program work. The scenario, RAID entry, and renewal excerpt are newly created illustrative reconstructions. No original internal materials appear here.
